DependencyErrors

```
/***
    USAGE:

    DependencyErrors(components, license, permissions)

    PARAMETERS:

    components : list of maps, [{}, {}, {}, ...]
        Components to test. Each component defines
            name => component name or capability to test for
            sid => Service ID (sid) to check for in license. If present,
            requires => Capability to check in the license. If present, c
            (optional) title => User-friendly component name
            (optional) link => Link for more information in case of error

    (optional) license : str (default: nil)
        Site license type to check for; one of 'commercial' or nil

    (optional) permission : str (default: nil)
        Permissions required for current user; one of 'admin' or nil

    VERSIONS:

    1.0     15-Jun-10    kalida     initial version
    1.1     15-Jul-10    kalida     added capability checks
    1.2     03-Mar-11    kalida     updated regex for bug MT-9851
